

IAPCON 2025
**32nd International Conference of
Indian Association of Palliative Care**
Pre-conference Workshops: 30th Jan 2025
Conference: 31st Jan - 2nd Feb 2025

Welcome to CBT Sensitisation Workshop.

Learn to:
**Identify & Address
Dysfunctional Thoughts**

JUSTIFICATION

Cognitive Behavioral Therapy (CBT) is a form of psychotherapy that helps to identify and challenge unhelpful thoughts and its impact on psychological wellbeing. It is increasingly used for cancer patients to manage the psychological distress associated with cancer diagnosis (anxiety, depression, denial) and treatment (side effects, acceptance, resilience). CBT can help patients develop adaptive coping skills, reduce stress, manage treatment related symptoms, and improve communication with healthcare providers.

Patients can learn relaxation techniques, cognitive restructuring, and pain management strategies to address emotional and physical challenges. CBT can enhance patient well-being and improve treatment outcomes improving Quality of life (QOL) when used in conjunction with standard medical care.

TARGET AUDIENCE - Psychologists, Counsellors, Social Workers

Key learning Objectives

1. To understand concepts that underpin CBT theory and its application in palliative care
2. To apply CBT for managing pain, anxiety, and insomnia

Sub-topics

Revisiting the domains of palliative care: Psychological care

CBT based approaches in improving psychosocial care for the stakeholders involved along the trajectory of cancer
